

AdamsBrain M1, Phase 0: Foundation

Product: AdamsBrain, an adaptive tutor for NY Regents Algebra 1 (persona: Mr. Adams). Sessions 1 to 7, 4 sessions/week. Dates are estimates: the plan is weekly, not daily, so a slipped day is not "behind."

Phase goal: a repo a stranger could clone and understand, a written plan, four screens designed. **Done when:** README, PRD, data model, ADR-001, definition-of-done committed; 4 Figma screens; git branch-to-merge loop done without looking it up. **Code rule:** all Phase 0 is [YOU], no app code yet.

Session	Est. date	Focus	#	Deliverable	Done
1	Mon 15 Sep	Environment + git	1	Node LTS, VS Code, Git installed (node -v, git --version)	☐
			2	Old codebase pushed to adamsbrain-v0 (archive, don't delete)	☐
			3	Fresh adamsbrain repo, private, correct .gitignore (Node + .env)	☐
			4	Stub README, two sentences (say Regents Algebra 1, not WASSCE)	☐
			5	Full git loop x2: branch, commit, push, PR, merge, delete branch	☐
			6	GitHub Project board set up + branch protection ON for main	☐
			7	Standing rule adopted: every deliverable is a branch + PR, no direct commits to main	☐
2	Tue 16 Sep	PRD	8	PRD template filled, 90 min, unpolished	☐
			9	Core principle recorded: tutor scaffolds and fades based on estimated mastery	☐
			10	Engine curriculum-agnostic: content is swappable data (Regents now, WASSCE later)	☐
			11	Three clusters locked: linear equations, functions, quadratics (verify vs NYSED blueprint + your students June errors)	☐
			12	Cohort note: v1 serves the 11 January retakers; engine must serve first-time takers unmodified	☐
			13	Permissions + data paragraph: who approves the pilot, what data is collected, where it goes, what the school is told	☐
			14	Content licensing checked: NYSED terms for reusing past Regents items	☐
3	Thu 18 Sep	PRD review + data model	15	Committed as docs/PRD.md	☐
			16	PRD reviewed with me, sections 1 and 4 revised	☐
			17	Data model drawn on paper: entities, fields, relationships (an ERD)	☐
			18	Skills tagged with standard taxonomy codes, not Regents-only labels (verify NYSED standard naming)	☐
			19	teacher_id and section_id in the schema now, even though v1 has one of each	☐
4	Sat 20 Sep	Figma: design system	20	Photographed, brought to me	☐
			21	Type scale, colour palette, spacing scale	☐
			22	Button states: default, hover, pressed, disabled, loading	☐
			23	Input states: default, focus, error, filled	☐
5	Mon 22 Sep	Figma: screens 1 to 2	24	Values exported for Tailwind	☐
			25	Login screen	☐
6	Tue 23 Sep	Figma: screens 3 to 4	26	Topic selection screen across the three clusters (mobile widths first)	☐
			27	Chat/tutor screen, including empty and loading states	☐
7	Thu 25 Sep	Decisions + review	28	Conversation history screen (Figma work ends here)	☐
			29	docs/adr/001-stack.md: Next.js, Postgres over Mongo, Auth.js over Firebase, note the reversal	☐
			30	docs/adr/002-regents-pivot.md: why Regents replaced WASSCE, and what it cost	☐
			31	docs/definition-of-done.md	☐
			32	README rewritten properly from the PRD	☐
			33	LEARNING-LOG.md started: what broke, what you learned	☐
			34	Phase review with me, then send ticked table + one honest line on pace	☐

Scope closes at Session 8. Backlog (not M1): calculator methods as curated data, teacher dashboard, the other 80 students, WASSCE pack. **Figma timebox:** sessions 4 to 6 only, hard stop. **Call me immediately if:** stuck 90+ min, tempted to copy code you don't understand, want to add scope, or two sessions pass with nothing ticked. Silence is the failure mode.

When you sit down for Session 1, open a new chat and say you're starting. I'll give you the git commands with explanations and the README stub.
